

National Severe Weather Warning Service

Chief Forecasters Assessment

An active, showery frontal zone will move across southern Scotland and northern England during Friday morning. While rain is more likely along southwestern coasts, as this frontal zone meets colder air inland the rain is likely to turn to sleet and snow, especially over higher ground, but occasionally to some lower levels too.

The Met Office have issued a **Yellow Warning of Snow**

Valid from **09:00 on Fri, 08th Jan 2016** until **17:00 on Fri, 08th Jan 2016**

Outbreaks of sleet and snow will spread across parts of Southern Scotland and northern England this morning, continuing into the afternoon before clearing east into the North Sea by evening. Some of this will be heavy and could bring accumulations of 5-10 cm on ground above 200 to 300 metres, with 1-3 cm settling to low levels in places. Please be aware of some difficult driving conditions and the risk of travel disruption.
